The other news of the week is about the neverending story regarding the standalone version of the CAS...today's news, which still comes from the Netherlands, is that this utility may be released **only on in digital format**. This means, then, that if you want to buy it, you can do it only on the EA Store. You won't find it in real stores. This sound a bit weird but seems to be true, at least in Holland. We'll see what happens in the other countries...
